```
========================================================
DIMO - KNOWLEDGE TRANSFER (KT) SESSIONS
Schedule: 8 June - 17 June 2026
Sessions 3-11  |  Total ~ 9 hours

DIMO is a clinical-trial data platform:
  - ATHENA  : data extraction and transformation
  - MUSES   : table / chart rendering in the frontend
========================================================

SESSION 3 - Introduction to DIMO ATHENA (data extraction and transformation)   [1.5 hr]
--------------------------------------------------------
  - Introduction to DIMO
  - MUSES / ATHENA structure
  - Login with SSO
  - Create datasource (status: PROVISIONAL / ACTIVE / RETIRED)
  - Data extraction from database
  - Uploading flat files (xlsx / csv)
  - Data processing
      * Datasource of data processing using Pygrpc
        (leveraging Pygrpc env for token secrets)
      * Datasource of Python script
      * GLIB (functions script / common data)
  - Data configurations
  - Batch jobs

SESSION 4 - DIMO MUSES (table / chart rendering in frontend)   [1.5 hr]
--------------------------------------------------------
  - MUSES structure
  - Create render
  - Region and Menu
  - Deployment
  - Check data refresh in PROD

SESSION 5 - Vendor Study transformation (PPD as example)   [1 hr]
--------------------------------------------------------
  - Transform DM, IE
  - Build subjstat (screened / randomized / screen failed / in screen)

SESSION 6 - DIMO maintenance work - Data refresh   [1 hr]
--------------------------------------------------------
  - FSE Refresh
  - KTI Refresh
  - PLAI File Transfer
```

```
  - New Sites Notification / recent update
  - READI data sharing
  - Outsource Study Setup

SESSION 7 - Revel architecture & Athena   [1 hr]
--------------------------------------------------------
  - Revel architecture & Athena

SESSION 8 - DIMO MUSES   [1 hr]
--------------------------------------------------------
  - Deploy workflow
  - Page Render workflow
  - Goal Page workflow
  - Lessons & Learns (what we've encountered till today)
      * Maintenance work
      * KPIs Notification email trigger
      * Study Final Report trigger
      * New Sites Notification
      * Replace user / stakeholder contactor name

SESSION 9 - High-level architecture & DevOps flow   [1 hr]
--------------------------------------------------------
  - GitHub repositories, image registry usage
  - CI/CD pipelines and secrets management
  - Namespaces and clusters
  - Domain / DNS routing & certificates
  - Deployment flow walkthrough (dev -> uat -> prod)

SESSION 10 - Operations & Knowledge Wrap-up   [1 hr]
--------------------------------------------------------
  - Kubernetes Secrets, Helm values structure
  - SCALe platform access
  - Backup & restore procedures
  - Known issues, tech debt, resource constraints

SESSION 11 - Pygrpc and Jupyter service   [1 hr]
--------------------------------------------------------
  - Jupyter and Pygrpc services
      * Code design
      * Maintenance

========================================================
```

NOTES

(Use this space to capture your own notes during each session.)
